Commentary

Python's growth is «absolutely explosive» and not slowing down, says Anaconda CEO, Peter Wang.

Commentary

Python's growth is «absolutely explosive» and not slowing down, says Anaconda CEO, Peter Wang.

– [TechRepublic](#), 25 May 2021

There are two things that Python does that are very different from all other major languages.

Number one, it has a pedigree of being a teaching language. It's easy to use, easy to pick up, kids use it, non-programmers pick it up in a weekend. This is not accidental; it has been a hardcore part of the design from the very beginning and quite intentional...

The second thing that's interesting about Python is that from the very beginning it's good as a glue language.

I mean, Python's competitor is Excel.
